

Guest Data Privacy Policy

Document number: GDP-01

Revision: 3.0

Effective from: 20 September 2026

Review date: 19 September 2028

Department: IT

Document type: Policy

Replaces: GDP-01 v2.0

1 Purpose

Guests share personal information with Aurelle to make their stay possible. This policy explains how that information is collected, used, protected and deleted. It also covers personal data about Aurelle employees.

2 Training

2.1 Privacy training

Employees whose role involves guest personal data must complete Guest Data Privacy training within their first week.

2.2 Content of the training

The training covers what counts as personal data, the principle of minimum access, identity documents, guest confidentiality and what to do when something goes wrong.

3 Access

3.1 Purpose limitation

Guest personal data may only be accessed to deliver the guest's stay or for a documented business need.

3.2 Access by role

PMS access levels follow the IT Access & Acceptable Use Procedure (ITA-01). Every profile view is logged, and IT reviews unusual access patterns each month.

4 Identity documents

4.1 Scanning

A guest's passport or national ID may be scanned only into the PMS; paper copies are prohibited.

4.2 Retention

Scanned copies of guest identity documents must be permanently deleted from the PMS no later than 3 days after check-out.

4.3 Automatic deletion

The PMS runs a nightly deletion job for identity scans that have reached the end of their retention period. Night audit reports list any scans the job was unable to delete.

4.4 Guests without documents

Guests unable to present an identity document are referred to the Duty Manager.

4.6 Consent

Front Office Associates must obtain the guest's written consent before scanning an identity document.

4.5 *Personal devices*

Guest identity documents must never be received, photographed or stored on personal mobile phones or messaging apps.

5 Guest confidentiality

5.1 *Callers and visitors*

Room numbers and guest names must not be disclosed to callers or visitors; calls are to be connected to the room without confirming the guest's presence.

5.2 *VIP and privacy-flagged guests*

Some guests ask for additional privacy. Their PMS profile carries a privacy flag, and their name does not appear on arrival lists printed for other departments.

5.3 *Marketing preferences*

Marketing preferences are recorded in the guest profile and honoured across all Aurelle properties.

5.4 *Malaysian properties*

At Malaysian properties, guests must sign the Personal Data Consent Notice at check-in before any marketing preferences are recorded.

6 Employee data

6.1 *Personnel files*

Employee personal files must be accessed only by Human Resources and stored in the HR system, never in shared drives.

7 Incidents

7.1 *Reporting data incidents*

Any suspected loss or disclosure of guest data must be reported to the Duty Manager and IT within 1 hour of discovery.
