

Information Security Policy

Document ID	ISP-01
Title	Information Security Policy
Version	1.0
Status	Approved
Effective Date	2024-06-01
Review / Expiry Date	2026-02-14
Owner Department	IT
Category	Policy
Applies To	All employees and contractors with system access
Supersedes	None

1. Purpose and scope

1.1 Purpose

Aurelle holds personal data about guests and employees, payment information and commercially sensitive rates. This policy sets the baseline security behaviour that protects that information across all properties.

1.2 Scope

The policy covers every person with an Aurelle account: employees, trainees, contractors and agency staff, on company or enrolled personal devices.

2. Security awareness

2.1 Basics training

All employees must complete the Information Security Basics e-learning module before being granted access to any Aurelle system.

2.2 Refresher training

The Basics module is refreshed every year, with short monthly awareness messages on the staff intranet.

3. Accounts and passwords

3.1 Password standard

Passwords must be at least 8 characters long and must be changed immediately if compromise is suspected.

3.2 Password manager

Aurelle provides a corporate password manager for colleagues who use several systems. Passphrases made of four or more unrelated words are both strong and easy to remember.

3.3 Multi-factor authentication

Multi-factor authentication should be enabled for email and for the Property Management System (PMS) where available.

3.4 Authenticator app

The approved authenticator app is installed during IT onboarding. Hardware tokens are available for colleagues without a smartphone.

3.5 Personal accounts

Users must never share login credentials; every action in the PMS must be performed under the user's own account.

4. Workstations

4.1 Shared terminals

Front desk and outlet terminals are shared between colleagues on the same shift, which makes personal log-in and log-out especially important.

4.2 Locking screens

Workstations must be locked whenever they are left unattended.

5. Email

5.1 Phishing

Suspected phishing emails must be reported using the Report Phishing button and must not be forwarded to colleagues.

5.2 Common signs

Phishing messages often create urgency, imitate senior managers or suppliers, and link to login pages that look almost identical to Aurelle systems.

6. Data handling

6.1 Classification

Class	Examples	Storage
Public	Published rates, brochures	Any Aurelle system
Internal	Rotas, procedures	Aurelle systems only
Confidential	Guest and employee personal data, card data	Approved systems only, access by role

6.2 Removable media

Guest or employee personal data must not be copied to USB drives or personal cloud storage.

7. Incidents

7.1 Reporting

Any suspected security incident must be reported to the IT Service Desk immediately.

7.2 Examples

Examples include a lost laptop or phone, an email sent to the wrong guest, an unknown person in a back-office area, or a colleague's password written on a sticky note.

Revision History

Version	Date	Summary of changes
1.0	2024-06-01	Initial information security policy.
